

CURIOSITIES

The (re)discovery of Poland

SAIMA MECCANICA, we do not fear denials about, is one of the best known brands in the production of painting systems even in Poland. The dialogue between Italy and this important member of the EU began almost twenty years ago and has never been interrupted, so that, just in Poland, Saima is present with several official distributors, in the sign of a true fruitful and lasting cooperation. This is also because the automotive sector, in the broadest sense of the term is one of the main industrial sectors in Poland, it represents approximately 10% of the production of that State. Moreover, Poland is an important manufacturer of buses, mainly for export. This is the reason why, thanks to our distributor SAIMA SERVICE POLAND, we present today the industrial plant "Large Vehicles" designed for the painting of buses and trucks in the Warsaw area. A very important focus for an installation that is the last in terms of time but not the least for its importance! It is a further example of the fact that innovation and security can coexist and bring to real and even beautiful results!
